

CLAIMS

1. A delivery system comprising a body construction and at least one capsule containing a pharmaceutical composition, said capsule having at least a first end and a second end, **characterized** in that the body construction (7, 12, 34) has at least two locking parts (9, 10), each locking part (9, 10) having at least a first end and a second end, said first end of each locking part (9, 10) having a surface adapted to face and cover one of the at least first and second ends of the capsule (8), the diameter of at least one of the locking parts varying along its length between said first end and said second end, and in that the capsule (8) is mounted between said at least two locking parts (9, 10).
2. The system according to claim 1, **characterized** in that the cross-sectional profile of said at least first or second end of the capsule (8) is essentially identical in size and shape to said surface of the locking part (9, 10) facing said end of the capsule.
3. The system according to claim 1 or 2, **characterized** in that said body construction (7) consists of one body part.
4. The system according to claim 1 or 2, **characterized** in that said body construction (12, 34) consists of at least two body parts.
5. The system according to any of the preceding claims, **characterized** in that said locking parts (9, 10) have the shape of a truncated cone and in that the end of the truncated cone having a larger diameter is the end having the said surface facing said end of the capsule (8).
6. The system according to any of the preceding claims, **characterized** in that the surface of the cross-section of said at least first or second end of the capsule (8) is essentially smaller than said surface of the locking part (9, 10) facing said end.
7. The system according to any of the preceding claims, **characterized** in that it has two or more capsules (8) containing a pharmaceutical composition.
8. The system according to any of the preceding claims, **characterized** in that said capsule (8) containing a pharmaceutical composition consists essentially of a biocompatible polymer and at least one pharmaceutically active agent.

9. The system according to any of the preceding claims, **characterized** in that said system is an intrauterine system.

5 10. A manufacturing process of a delivery system, said system comprising a body construction and at least one capsule containing a pharmaceutical composition, **characterized** in that said body construction is injection moulded and in that said capsule is injection moulded on the body construction in a further step.

11. The process according to Claim 10, **characterized** in that said body construction consists of one body part.
